Volunteers Needed!

Help document local flooding & storm impacts.

Massachusetts state agencies & other partners use MyCoast data to understand changes happening along our coast from storms and extreme tides.

You can help! Upload your photos to the MyCoast app or website.

1. You add your photo and observations

Upload photos of coastal habitats, damage, and flooding to the app or via your computer.

2. We match it to background data

Our servers retrieve weather and tidal information to match your photo's location.

3. Your report informs decisions

Your observations help coastal managers and others make informed decisions.
